

Dynamic Fonts - FAQ

Dynamic Fonts - FAQ

General Questions :

What is a Dynamic Font?

Dynamic Font is a Portable Font that gets downloaded on the users computer when the user visits your web page. Thus the user does not need to download and install fonts to view web pages made in some special fonts used by you. Such special fonts include artistic fonts, Indian Language fonts etc.

Why should I use a Dynamic Font?

If you want to use some attractive fonts on your web site but are sure that such a font may not be available on the user's system, you can use a Dynamic font for the particular font being used by you. If you are developing a web site in an Indian language, you can make use of the Dynamic font as the all the users may not be having the font being used by you. To save them from downloading the font and installing it on their computer, a dynamic font is used.

Where do I get Dynamic Fonts from?

We are making Dynamic Fonts and you can get these from us.

Are dynamic Fonts available in Indian Languages?

Yes. Dynamic fonts are available for All Indian Languages.

How many Dynamic Fonts do you have?

We have many of them. In fact we have a large collection of fonts for use on MS Windows. Any of these fonts can be supplied to you as a Dynamic Font. You can ask us for a sample file or visit the related links on our web site.

Do you have some standard Dynamic Fonts for Devnagari?

Yes. You can use MillenniumVarun for body text and MillenniumGanesh for Heading etc. These fonts are becoming a standard on the web for Devnagari script. This means, now you can make web sites in Hindi and Marathi using these fonts.

How can I use Dynamic Fonts on my web pages?

When you buy a Dynamic font from us, we provide you with all the documentation and supporting files to help you in using the font in your web page.

What resources do I need to have to use a Dynamic Font on my web site?

Your web server should support dynamic font extension. If you are unsure, you can check up with your hosting provider. If the web server is not supporting dynamic font extension, you can ask your hosting provider to activate the support. Apart from this, you need to place a few files on your web server and also provide a link to some files on our server. We will guide you on this when you buy a dynamic font from us.

Can I use more than one Dynamic Font on a web page?

Yes, Surely. You can use as many Dynamic fonts as you want on a web page. All that you need to do is provide suitable links and tags on the web pages.

Dynamic Fonts - FAQ

How do I type using a Dynamic Font?

Firstly, you are not going to type using a Dynamic font. You will need to have a software that allows you to type contents. The contents of the web pages having dynamic fonts used in it are the typed in the same way as you type your normal contents. All that you need to do to include a Dynamic font on the page is include some links and tags on the page and the page is displayed in the dynamic font. You can use any standard HTML Editor as you like to make such pages.

If you wish to type Devnagari text, you will need to have our software for Devnagari Keyboard Driver. Currently we supply FontFreedom Engine for typing your text in Devnagari, i.e. Hindi and Marathi. This software is available from our website <http://www.cybershoppee.com> and <http://www.fontfreedom.com>.
